

Angsana teams up with Alpha Data

Angsana Hotel & Suites Dubai is to team up with UAE system integrator Alpha Data to provide cutting-edge technology for its guests.

According to general manager Kamel Ajami, Banyan Tree's sister brand will work in partnership with Alpha Data to provide its guests with the "ultimate guest experience" at the 816-room property.

"We sought partnerships with established, forward-thinking organisations that had already built a successful system integration reputation in the hospitality sector," said Ajami.

"In addition we have joined our efforts with a leading technology

partner at the cutting edge in order to ensure that the systems we utilise will provide our guests with the very best facilities."

Alpha Data's guestroom installations will include a bedside IP phone with high-resolution colour touch screen, from which guests can order a range of services, while a set-top box connected to the network will provide on-demand television, video and audio, with wireless internet available throughout the hotel.

Alpha Data hospitality consultant Anil KJ said that Angsana Hotel and Suites Dubai was seek-

ing "a unified system that would provide superior personalised and customised guest services, creating a more comfortable and enjoyable hotel experience".

Alpha Data also has plans to build an infrastructure data centre for the property to manage its infrastructure, security and the property's overall performance.

"Alpha Data has a wealth of experience designing and supporting data centres, and the solution they have provided us with here has been tailored to our specific requirements," concluded Angsana Hotel and Suites' Ajami.
